

Task 7 : Laundry Services Hamburger Menu in Mobile

Problem Statement : Develop a Hamburger Menu For the mobile view of the Laundry Web App..

Problem Description : While making our website responsive in the last assignment we removed the links from the mobile version. Now We have to make a hamburger menu icon when User clicks, it should open a menu from the right side of the screen.

Tasks :

- **Navbar:**
 - Add a hamburger menu Icon in the navbar and by default keep it hidden.
 - Make its visibility on for mobile view only.
- **Menu List:**
 - Make a div and keep its position absolute on the right side of the screen.
 - Keep its display none by default.
- **Showing List on Click:**
 - As of now we won't use any javascript to track the click we will just wrap the hamburger icon in a button and use :focus pseudo class to track if the button is in focus then display the list.
 - Even if you know javascript try to do it this way only, you will learn something new about css.
 - Hint :- if you try to style an element **A** on focusing or hovering some other element **B** then **A** should be a child or sibling of **B**.

Submission Guidelines :-

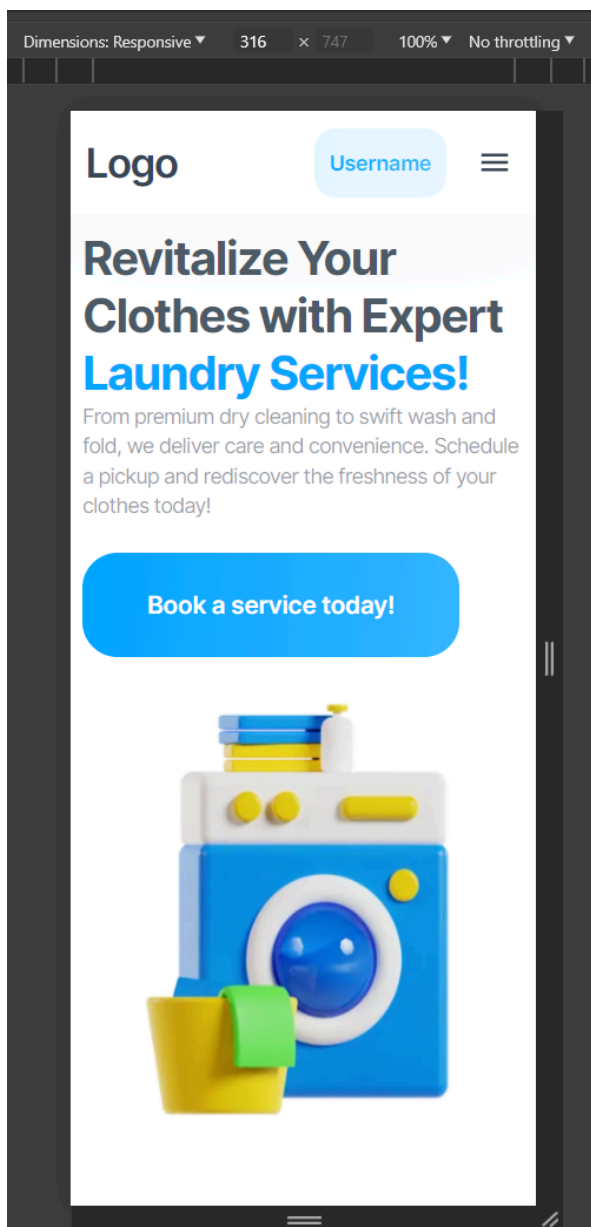

- Deploy your code to netlify make sure to name your html file as index.html.
- Submit the Deployed Link below in the same task number
- If you dont know how to deploy watch this:- https://youtu.be/li2Y4i4_i-o
- Submission link :- <https://upskillmafia.com/mern/dashboard/tasks>

Note : You can take help from **Internet** or You can also connect with upskill Mafia **Mentors**

Sample Outputs:-

Mobile:-

Menu icon

Menu List
